POTONGAN PRINSIP

CROSS VENTILATION

Natural airflow moves from the basement intake toward upper openings, enabling consistent cross ventilation and heat removal.

DESIGN FOR WELLNESS

spatial layouts that aim to support the physical, mental, and emotional health of its users

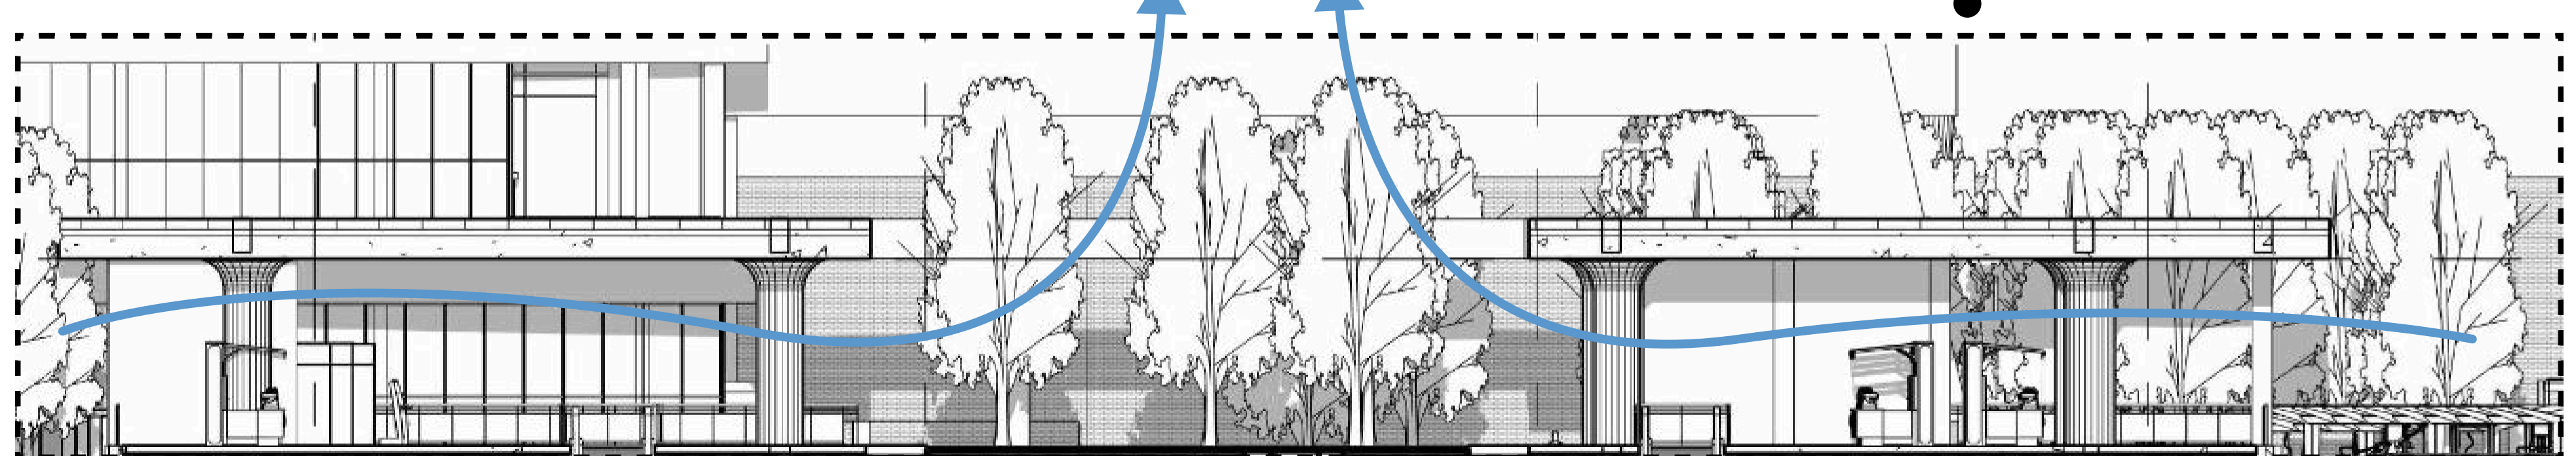

LANDSCAPE

Trees act as natural barriers to road noise and hot air from vehicles. And produce oxygen that will be carried into the building function.

NATURAL LIGHT

The slanted roof element functions as a sun shading device by blocking direct sunlight while still allowing diffused natural light to enter the interior space.

OPEN SPACE

The open space facilitates natural cross-ventilation, allowing cool air to flow through the space and hot air to rise and escape vertically.
